

## **Project Guidelines**

1. You may work in groups of two or three people. You should turn in one project for the entire group.
2. Your project should be well written. You should turn in a report of your findings, not simply the work done. You may include calculations in an appendix to the project, but the report should focus on the findings and the mathematical implications of the findings.
3. You will be graded on the correctness of the mathematics used, the structure of the report, and the creativity put into the project.
