Report template for lab assignments
Submit online: (Subject: CSCI 566 <Your name> Lab Assignment)

I.   Cover page

    a. CSCI566 Networking Lab
    b. Title
    c. Name
    d. Date due

II.   Terms (if necessary)

III.   Objective and Overview of the lab

Briefly describe what this lab is about;
       What concept it covers;
       Why is this lab important?
       What is your expected to learn about by doing this lab.?
       For security labs, describe the vulnerability being examined.

IV.   Procedure

What did you do? Write this so someone can understand the lab assignment from your words. You can use words from the assignment given.
Document the assignment: what was asked and what you did

V.   Results

Describe the outcome of what you did.
- This would be data shots of the simulator for the simulation labs, along with an explanation of what they mean.
- For programming labs, this would be a description or design of the code you wrote and the output of the assignment

In the text describe and label any figures you include. This is to show you know what they mean.
Collect any data you have obtained and present it in tabular form. For the OPNET labs, this will mainly be snap shots of results. Label the images as "Figure <num>".
Screenshots will be sufficient, preferably using <alt><printscreen> after selecting the window of your choosing. Include descriptions of each screen shot.

VI.   Conclusion/ What you learned

Explain the results of the experiment. Summarize your findings in doing the experiment.
Tell me what worked, what didn't work, what you learned, what you thought about the assignment (do you want more like it or less like this)
For security labs, discuss prevention.

VII.   Code (if relevant)
